## DESCRIPTION

The MityCCD-H10141 family of cameras integrates thermoelectrically cooled high performance CCD sensors suitable for scientific instrumentation with digital signal processing (DSP) capabilities.

An embedded camera rich in features, MityCCD is ready for stand-alone applications. A simple block diagram of the MityCCD camera is illustrated in Figure 2.

By integrating a floating point DSP and field programmable gate array into the camera electronics, the MityCCD camera provides the capability to embed application specific code (binning patterns, post processing algorithms, etc.) into a delivered instrument.

The MityCCD uses standard high speed interfaces including 100 Mbit Ethernet and USB 2.0 and eliminates the need for custom interface cards or electronics to a display PC, allowing the use of laptop devices, embedded computers, or (via Ethernet) remote display machines.

### Notes:

1 – The Readout Rate in a MityCCD stock camera is 493 KHz. The readout rate may be customized for user specific applications, please contact Critical Link, LLC, for details.

2 – The MityCCD cameras offset two gain settings, which are user configured via a software setting.

3 – Throughput rates assume a back-end PC capable of accepting the data rates provided by the camera.

4 – Assumes Full Vertical Binning within the CCD down to 1 output row using USB interface

5 – The MityCCD camera must be powered by the MityCCD-PS power supply assembly, which uses a 12-24 DC input in order to generate all necessary voltages to run the camera. The 8 Watt minimum power utilization represents a camera with no TE cooling enabled.
